Skills

React | NextJS | MongoDB | NodeJS | Javascript | Typescript | C++ | TailwindCss | Sass | Redis | Docker

Projects

Dev OverFlow

A community platform for asking and answering programming questions. Get help, share knowledge and collaborate with developers all around the world. Explore topics in web development, data structures etc.

Tech Stack: Next.js, TypeScript, MongoDB, Tailwind CSS, Clerk (Auth), shadcn/ui, Context API, React Hook Form, Zod.

- Leveraged Next.js to build dynamic user interfaces, used server actions and API routes.
- Implemented advanced search functionalities, including local and global search, filters, and pagination.
- Developed a comprehensive user engagement system, tracking question views and implementing a recommendation algorithm based on user interactions.
- Introduced custom badges to recognize user presence and growth, along with features for upvoting, downvoting, and adding to favorites.
- Utilized OpenAI for generating personalized answers and responses.
- Enhanced the platform with a job searching feature to provide a holistic developer experience.
- Enabled users to customize their profiles and explore other developers' profiles within the platform.

Taskify

Taskify is a web app designed for efficient task management and collaboration within teams. It provides a user-friendly UI for organizing tasks into customizable boards, lists, and cards, allowing teams to effectively track their projects from start to finish.

Tech Stack: Next.js, TypeScript, MongoDB, Tailwind CSS, Clerk (Auth), Stripe, Unsplash, dnd(drag&drop), shadcn/ui, React Hook Form, Zod.

- Users can create multiple boards to represent different projects or workflows, customize lists within each board, and manage tasks via cards with drag-and-drop functionality.
- Collaboration tools enable real-time communication and teamwork by allowing users to invite team members to boards.
- Customization options such as board backgrounds, labels, and due dates provide flexibility to tailor the experience to team preferences.
- Activity logs track changes made to boards and cards, ensuring comprehensive tracking of project progress.
- Taskify offers a subscription per month model, providing scalability for organizations needing more than five boards.

Homzys

Homzys is a comprehensive real estate web application built using the MERN stack. It offers a seamless user experience with beautiful UI design, powered by various technologies and libraries such as JWT authentication, Tanstack Query for efficient data fetching etc.

Tech Stack: React.js, Node.js, Express.js, MongoDB, JWT(Auth), Tanstack Query, Mantine UI, React Leaflet, framer motion.

- Property Booking: Buyers can browse available residencies, book properties, and manage their bookings seamlessly within the application.
- Listing Creation: Sellers can easily create listings for their properties, providing comprehensive details and images to attract potential buyers.
- Beautiful UI: Homzys boasts an aesthetically pleasing user interface designed, providing an intuitive and engaging user experience.
- User Authentication: Secure user authentication using JSON Web Tokens (JWT).
- Favorites page, bookings page, interactive maps with very fast search functionality.

Education

UIET, Panjab University SSG Regional Center Hoshiarpur

2019 - 2023

Information Technology | CGPA: 9

CH. Balbir Singh Public School, India

2018 - 2019

Class XII | CBSE | Percentage: 79.60%

Woodland Overseas School, India

2016 - 2017

Class X | CBSE | CGPA: 10
